EXPERIENCE

Rise8, Inc.

Sr Product Designer / Product Lead May 2025 to Present

- Drove discovery to map the constraint blocking new tenant deployments on a government DevSecOps platform replacing a 12 to 18 month accreditation process, redirecting the roadmap to capabilities new programs need first
- Led the redesign of tenant onboarding from provisioning through first deployment, replacing a high-touch engineering process with reusable artifacts new teams run themselves
- Shaped the productization plan around four measurable outcomes (environment standup, time to first deploy, developer-led delivery, reusable compliance), giving leadership a single way to prioritize and report progress across delivery, compliance, and GTM

USAF – Kessel Run

Design Operations Lead Apr 2022 to May 2025

- Grew daily active users 300% for a flight scheduling application by mapping the full service experience and working with military leadership to clear the operational roadblocks holding it back
- Used service blueprints to align 8 delivery teams around operator needs, keeping engineering effort on high-impact work instead of features nobody asked for
- Built accessibility standards (Section 508), research templates, and design playbooks adopted across 5 programs that kept running after I moved on

Product Designer May 2017 to Apr 2022

- Cut maintenance initiation time 20% for a pilot debriefing app used across multiple airframes and branches by leading UX from research through delivery
- Mapped developer journeys on a Platform-as-a-Service, surfaced 5 key friction points, and drove changes that increased platform adoption roughly 40%
- Grew the application's footprint from 2 commands to 6 by building relationships with key advocates and running hands-on workshops with each new unit to show fit before pushing for rollout

DrewUX

Service Design Consultant Jun 2016 to Present

- Took a defense tech startup from concept to launch: ran user research, built service blueprints, and shaped the pitch that landed them a NYC local government contract and an SBIR grant
- Led discovery for a DoD data analysis startup and turned research into a value story that contributed to a \$150K Stage 1 SBIR award

EDUCATION

M.S. Human-Computer Interaction Iowa State University

B.S. IT Project Management Western Governors University
